**In 2011, I was diagnosed with Stage I Ductal Carcinoma right breast.**

It was found on a routine mammogram. I had a **partial mastectomy**. The lymph nodes were negative so I did not need Chemotherapy. **I chose not to have radiation**, as that was one of the options I had.

**It was suggested that I take Poly-MVA.** Everything I read about Poly-MVA was that it is an **antioxidant protection from damaging free radicals and nutritional support.**

After starting to take Poly-MVA, **my energy level increased and I was able to do everything as normal.** I was active in Church. I went to my organ classes each week. I was able to do my own housework. Went out to lunch with friends.

**My mammogram in June 2012 was normal after one year of treatment of Poly-MVA.**

Whenever, I called AMARC Enterprises, they were always helpful in explaining the benefits of Poly-MVA. Also, they were concerned how I was doing.

Carol J. Roberts

**8-29-2016**

Spoke to Carol and she says that her **oncologist said her mammogram came out normal**. As a result, he took her off aromodex. Her bone density is good except for her hip.

**8-29-2018**

Carol said **her latest mammogram was negative** and she is continuing to take a daily dose of Poly.
