Diagnosis: Lung Cancer

3 Updates

5-01-08 – 4-27-10 – 7-11-12

On **Nov 12, 2007**, I got diagnosed with **Adenoid cystic carcinoma** at the **upper lobe of my right lung** by biopsy.

On Dec 19, 2007, Dr. Meyerson **removed the right upper lobe of my lung**. The **tumor was completely removed** and surrounding **lymph nodes were negative**.

I **began Poly-MVA on January 27, 2008**, and took it daily, **2 tsp a day** along with the other supplements.

On Feb.2007 I had Asthma & bronchitis treated with prednisone varied doses, Cipro 500mg bid, and Azithromycin 250 mg.

On Mar 17, 2008, Started radiotherapy which ended on Apr 23, 2008. 200 cGy's per day, total 5400 cGy's. Upper lobe bronchus stump radiated, approximately 7 ½ cm X 5 cm. Of course my well being declined after the radiation **but after two months I was free of symptoms**.

By Jun 5, 08 the **Pet SCAN was negative.**

By **11/24/08 showed possible recurrence**, areas of suspicion: upper right lobe soft tissue and right lower lobe surface area. No fluid in lung.

A lung scan on **January 22, 2009, revealed a stable shadow in the right apex lung** and consolidation in the right base of the lung. My oncologist thought it was an inflammatory process which was first revealed on a PET/CT scan on November 24, 2008.

On January 29, 2009, I received five days of antibiotics (Azithromycin).

On February 11, 2009, a repeat PET/CT scan revealed the same shadow in the right apex lung and consolidation in the right base. **There was no uptake of radioactive glucose in either area.** The oncologist's conclusion is that the **areas were inflammatory processes and benign.** The oncologist is having the radiology oncologist review the film **to see if the inflammation could be from radiation (2008).**

I believe that **Poly-MVA has prevented any recurrence of my cancer as well as metastasis.** I look forward to following up with you to update my results.

Thank you,

Wilma

5-01-2008

Called to talk to Wilma and **she is doing well and still taking the Poly.** She is now **done with her radiation treatments.**

4-27-2010

Wilma is still diligently taking Poly MVA every day and is **now cancer free for 3 years.**

7-11-2012

Wilma will reach the **5 year cancer free mark in December** when she will **have her final scan**. She called to say hello and discuss whether she **should stay on 1 tsp** or lower to 1/2. I told her to please stay on at least 1 tsp. She is also still taking **CoQ10** and **D3** along with the maintenance dose of **Poly**.
