6 TEASPOONS DAILY

I wanted to provide this update on my current status. **My PSA is now .06 after levels in the 60's.** I had surgery and then 8 weeks of radiation. All went well and I had no side effects from the radiation. I have to attribute that due to taking the POLY MVA and the long term success.

I added at various times DMSO, GRAVILOA, TUMERIC, SODIUM DICHLORACETATE and ONKOBEL-PRO, **however the game changer was and is Poly-MVA.**

As a mitochondrial driver for metabolism and healthy/normal cell function, it was absolutely key to the overall approach. It helped across every aspect of health: Improved Quality of Life, more energy and no fatigue, my appetite was normal, I experienced no pain and all my blood work and panels were right in line each time.

**The oncologist was flat out amazed at every test.** The online materials, research and customer support and service is outstanding with the group that supports the community.

I share this with all my friend and family and it still amazes me that after all I went thru, others are reluctant to try it and follow thru, as they say " **YOU CAN LEAD A HORSE TO WATER**", however UNLESS THEY'RE OPEN TO Outside the Box

Thinking, AND SADLY MOST PEOPLE ARE VERY CLOSED when it comes to integrative medicine, they don't think of the rest of the body, they are to focus on the disease.

Thank you!

Neal
